Anisha Sahu

+91 98614 95311 | anisha.980sahu@gmail.com | GitHub | LinkedIn

Professional Summary

Computer Science and Information Technology student with hands-on experience developing full-stack applications, AI/ML solutions, REST APIs, and cloud-deployed systems. Skilled in Python, JavaScript, React, FastAPI, relational databases, Docker, and model deployment. Experienced in building content-intelligence workflows and a deepfake-detection platform, with a focus on maintainable software, secure APIs, and user-focused functionality.

Education

C. V. Raman Global University — Bhubaneswar, Odisha
Bachelor of Technology in Computer Science and Information Technology — *July 2024 – Present*

Jharsuguda Polytechnic College — Jharsuguda, Odisha
Diploma in Information Technology — *Nov 2021 – Apr 2024*

Technical Skills

Programming Languages: Python, JavaScript, Java, C, C++
Frameworks and Libraries: React, Next.js, FastAPI, Tailwind CSS, Sentence-Transformers
AI/ML and NLP: Deep Learning, NLP Heuristics, FAISS, Grad-CAM, Content Scoring
Backend and Security: REST APIs, JWT Authentication, Role-Based Access Control, Rate Limiting, Input Validation
Cloud and DevOps: AWS, Docker, Vercel, Hugging Face Spaces, Git, GitHub
Databases: MySQL, PostgreSQL

Projects

RealFake Detection Platform | ***Python, TypeScript, React, Next.js, FastAPI, Docker, JWT*** 2026

- Built and deployed a full-stack deepfake-detection platform with a Next.js dashboard on Vercel and a FastAPI inference backend on Hugging Face Spaces.
- Implemented lazy loading for 295 MB AI model artifacts to work within cloud-platform upload constraints.
- Integrated Grad-CAM heatmaps into the frontend to help users interpret model predictions and visualize image regions influencing detection results.

Curate AI — Automated Content Intelligence & Scoring Engine | ***Python, FastAPI, NLP Heuristics, Sentence-Transformers, FAISS*** 2026

- Developed a content and hook scoring engine that evaluates copywriting using curiosity-gap detection, sentiment resonance, and platform-specific audience-retention signals.
- Built a cross-platform content-repurposing pipeline that adapts source material for Instagram Reels, TikTok, YouTube, and LinkedIn.
- Designed multi-step prompt-generation workflows with token and credit cost tracking, reducing repetitive content-generation overhead by over 70%.
- Integrated automated channel data collection and heuristic audience-persona modeling to adapt script tone using audience demographic and engagement signals.

Certifications

Google UX Design Professional Certificate — UX research, wireframing, prototyping, Figma — 2024

Data Structures & Algorithms Training, Internshala — data structures, algorithms, complexity analysis — 2023

IT Essentials: PC Hardware & Software, Cisco Networking Academy — PC components, operating systems, networking, troubleshooting — 2022

Summer Practical Training for Engineering Students, BSNL — telecom infrastructure and network operations — 2022

Additional Information

Languages: English (Proficient), Hindi (Fluent), Odia (Native), Sambalpuri (Native)

Professional Strengths: Communication, adaptability, attention to detail, collaboration, initiative

Interests: Full-stack engineering, AI/ML applications, cloud deployment, UI/UX design, open-source software
